Electronic Store

A platform built to cater to your
electronic needs.

HTML, CSS, and JavaScript Project

Motivation Behind The Project

- I am deeply interested in the e-commerce industry and wanted to create a web project in this domain.
- I saw a need for a user-friendly and reliable electronics shopping platform and aimed to fulfil it with this project.
- This project presented an opportunity to enhance my web development skills.

Total Pages Created

- A total of 30 pages were created for this project.
- These pages are organized into different categories to ensure a seamless user experience.

Categories Include:

- Homepage
- Subcategories (Mobile & Accessories, Laptop, Television)
- Product Details
- Billing
- About Us
- Contact
- Reviews
- And more, including additional features and content.

Homepage Overview

- The homepage serves as the first point of contact for visitors to our electronic store website.
- It provides a user-friendly interface with easy navigation to different product categories, including Mobile and accessories, Laptops, and televisions.
- You can see featured products, a search bar, and a quick link to Shop Now for special offers.

The screenshot shows a mobile device displaying the homepage of an e-commerce website. The header includes a navigation bar with links for Home, About Us, Contact Us, Login/Signup, Reviews, and Track Your Order. A search bar is located at the top right. The main content features a large "Welcome to My Electronic Store" heading. Below it is a section titled "Shopping By Categories" showing images of a smartphone, a laptop, and a television. A blue callout bubble at the bottom right points to the "Homepage" text.

Welcome to My Electronic Store

Shopping By Categories

Homepage

Product Details and Billing

- In addition to the homepage and subcategory pages, I've also created a 'Product Details' page.
- This page allows users to view detailed information about a product before making a purchase.

Checkout Page

Razer Blade 15 Gaming Laptop

Price: \$1,27,599

Discount Price: \$1,199.99

Quantity:

Save for Later

Proceed to Buy

Add to Cart

After selecting products, users can proceed to the 'Billing' page to complete their purchase.

Other Projects

- In addition to my electronic store, I've also created three other projects:
- Calculator
- Portfolio
- To-Do List
- Each project was developed using HTML, CSS, and JavaScript.
- You can explore these projects and their code on my GitHub profile.
